DO TUNG DUONG

Frontend-focused Full-Stack Developer · Web3 & AI Products · Team Lead

duong98kk@gmail.com · 0969 374 623

SUMMARY

Frontend Engineer with 5+ years of experience building scalable React applications and Web3 products. Strongest in frontend; comfortable contributing to backend and mobile when needed. Experienced in leading cross-functional teams and delivering production systems across web, mobile, and Chrome extensions.

Strong focus on AI-assisted development workflows using Cursor and OpenClaw for planning, coding, code review, and testing—able to ship code in any language with AI (e.g. vibe coding). Enabling faster and higher-quality delivery, especially on frontend.

Comfortable acting as Team Lead, Product Owner, Scrum Master, or PM for a small team when needed in early-stage product teams. Able to deliver a project end-to-end without dedicated UI/UX or QC—design and testing with AI when needed; suited to lean teams or early-stage products.

WORK EXPERIENCE

Team Lead · Frontend-focused Full-Stack Developer 2024 – Present

Lab3 · Web3 & AI

- Lead development of Web3 and AI products used in production, aligning technical delivery with business goals.
- Use AI-assisted workflows (Cursor, OpenClaw) for planning, coding, review, and testing—faster delivery with consistent quality.
- Built and led React frontend for Web3 and AI products; collaborated on Node.js/NestJS backend, React Native/Swift mobile apps, and Chrome extensions when needed.
- Coordinated cross-functional teams (FE, BE, Design, QC) and contributed to product ideation and roadmap planning.
- Can design and prototype UI with AI when the team has no dedicated UI/UX or while waiting—keeps projects unblocked; at kickoff can show a concrete UI so team and design align, then design refines from that base.

Team Lead · Frontend Developer 2023 – 2024

Technixo · Web3

- Led a cross-functional team of 5 engineers (FE, BE, Design, QC) delivering Web3 products used in production.
- Scrum Master: facilitated ceremonies, backlog refinement, and continuous improvement; also PO and mentor for interns.
- Contributed to ideation and sales processes.

Frontend Developer 2023

Homa · Web3

- Developed Web3 product features using React and collaborated with backend and design to ship production releases.

Frontend Developer 2021 – 2022

FPT Software · Web2

- Built and maintained React.js and Vue.js applications; collaborated with backend and design.

AI-ASSISTED DEVELOPMENT WORKFLOW

Use AI across the full development lifecycle; can run a project end-to-end without dedicated UI/UX or QC:

- **Planning:** Sprint planning and daily task planning with AI.
- **Coding:** Cursor for accelerated development; capable of producing code in any language with AI (vibe coding).
- **Code Review:** AI-assisted review workflows.
- **Testing:** Dedicated OpenClaw instance validating FE, BE, and mobile outputs.
- **QA:** Cross-checking generated code to detect inconsistencies and bugs.
- **Design / UI:** Can design and prototype UI with AI when team has no UI/UX or to unblock—don't need to wait for a designer; at project start can show a UI so everyone aligns; design can then refine from that.

KEY ACHIEVEMENTS

- Led a cross-functional team of 5 engineers delivering production Web3 products.
- Delivered Web2 and Web3 applications across multiple companies; contributed to product roadmap, mentoring, and ideation and sales processes.
- Second place in a competition on applying AI in the workplace.
- Two years of full vibe coding—shipping features without writing code by hand; AI generates, I review and refine.
- Able to design and prototype UI with AI independently—don't need to wait for UI/UX; keeps projects moving when there's no designer or to align team at kickoff.
- Can deliver a project from start to finish without dedicated UI/UX or QC—design with AI, test with OpenClaw; works for lean teams or when design/QC are not available.

LATEST PROJECTS

Interns Market — AI Agent Marketplace

Tech stack: React, Node.js, OpenClaw, VPS.

Role: Product Owner & Team Lead. **Team:** 2 developers.

Description: Marketplace for pre-configured OpenClaw agents solving specific tasks. Example agent converts Chinese-language videos into Vietnamese-dubbed videos with subtitles using automated pipelines (text extraction → translation → voice generation → video re-encoding).

Lipstick — AI Beauty App (iOS)

Tech stack: React Native / Swift, AI/ML.

Role: Team Lead. **Team:** 2 developers (1 Full-stack, 1 AI dev).

Description: Mobile app for beauty consultation and try-on. Users take a face photo; the system analyzes skin condition and facial features to recommend products (e.g. clay mask for oily skin). Lipstick try-on: AI generates images of lips with different shades so customers can decide before buying.

Georeport — GEO Analysis Platform

Tech stack: React, Node.js, Chrome Extension, AI.

Role: Team Lead. **Team:** 2 developers (1 Full-stack FE + BE + Chrome extension, 1 AI dev).

Description: Platform that analyzes a website's GEO (Generative Engine Optimization) level. Just as we used to optimize for SEO so that search engines would find and rank us, in the AI era we optimize for GEO so that LLMs can discover and cite our content.

TECHNICAL SKILLS

Frontend

(primary)
React, Next.js, Vue, TypeScript · Redux, Zustand, Jest · Chrome Extensions

Backend

(when needed)
Node.js, NestJS, Supabase

Mobile

React Native, Swift

Payments

Stripe, RevenueCat, App Store

AI & Developer Tools

Cursor, OpenClaw · Vibe coding (ship code in any language with AI) · Design with AI (prototype UI when no dedicated UI/UX)

Methodologies

Scrum Master, Agile, Team Leadership · PM for small team when needed

LANGUAGES

Vietnamese: Native · English: Fluent reading comprehension (technical documentation); actively improving spoken communication

EDUCATION & CERTIFICATIONS

Military Technical Academy — Software Engineering

FreeCodeCamp — Responsive Web Design V8, Front-End Libraries V8, JavaScript Algorithms & Data Structures V7
freecodecamp.org/certification/hoangtulaptrinh/
